Big Data

In short: A field that treats ways to analyze, systematically extract information from, or otherwise deal with data sets that are too large or complex to be dealt with by traditional data-processing application software

Image: Big data is complex in its structure and often filled with errors

Data Science

In short: A field of study that aims to use a scientific approach to extract meaning and insights from data

Image: You can study data science in a university

Machine Learning

In short: Algorithms whose performance improve as they are exposed to more data over time

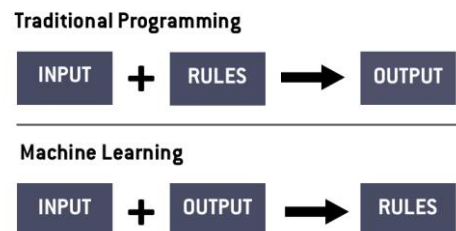

Image: In contrast to traditional programming, machine learning creates rulesets which we can use to process data

Artificial Intelligence

In short: A program that can sense, reason, act and adapt

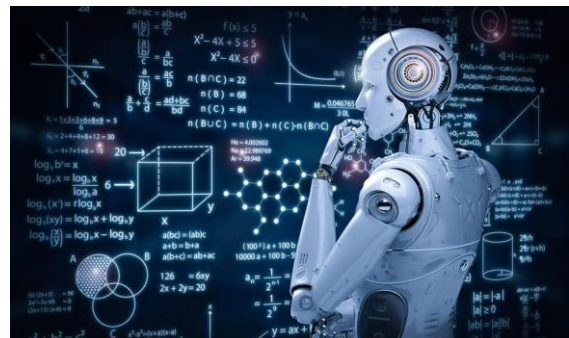

Image: As a program, an artificial intelligence is a what comes the closest to dystopian Hollywood depictions
